HEART RATE VARIATION

Heart rate variability (HRV) is a significant indicator in monitoring cardiac health, and SDNN (Standard Deviation of NN intervals) is one of the key metrics used to assess it.

A drop in SDNN below a certain threshold, such as 30 milliseconds, can be indicative of potential cardiac issues, including an increased risk of cardiac arrest.

- Evaluate Risk of Cardiac Arrest
- Baevsky Stress Index
- SDNN
- RMSSD
- LF/HF Ratio
